

Design

The ultimate focus is to have “book my show” explained on the web-based application. Design is user friendly so people can easy use that. People can be easy to search any movies and after that they easy to buy that. Every time user adds something in cart admin can see that which user what movies are they interested so depends on that admin can add relevant movies from the admin side.

Development

During the development phase, everything that will be needed to implement the project is arranged. As per the designs we work on the development first we create the virtual env depending on our requirements. In this task we have do some basic settings, so our app goes smoothly.

Implementation

The project takes shape during the implementation phase. In this phase developers are occupied with implementation process as they must implement front end task as well as backend. After creating one module we have unit test that if some errors comes so we can fix that, and this process follows on all the modules.

Installation

We are started our developing our application to showing the data. So first we have set virtual environment after that you have to activate that environment which you set. Next you have to install Django on that environment and after finishing installation you have to install all the requirements to full fill that project otherwise app will not work.

Use of Application

This application is very vital for modern day forms of presentations which effective medium to convoy appropriate information to a target people who likes it. Another beneficial part of this application it can showing us critical think newly and sort of different perspective information which is a skill that grow our decision making capability.
